

Small Particles, Big Issues: PRIORITYze DEI

Issue 24 14/06/2024: Making Results More Accessible part 2

Dear all,

In this edition of our newsletter, we want to share some useful resources to make your analysis results more accessible. We've gathered links and tools to help you create visualizations that are comprehensible even for those who might benefit from data sonification.

Graphs to Sounds

1. Rationale Article

- Data sonification transforms graphs into sounds, making data accessible to visually impaired individuals. To better understand this technique, read the article on [Scicomm bites](#).

2. Online Tools

- **Highcharts Sonification Studio**: Explore this online tool for data sonification. You can try it out [here](#) and consult the [GitHub repository](#) for more details. If you want to get started right away, follow the [getting started guide](#).
- **TwoTone**: Another interesting tool is [TwoTone](#), which allows you to transform data into music.
- **ObservableHQ Data Mapper**: Finally, explore [Data Mapper](#) on ObservableHQ for other sonification options.

We hope these resources help you make your analysis results more accessible and inclusive.
Happy data sonification

Best regards
Mariasole and Camilla

In collaboration with Arianna Varrani
